Table of Contents

Introduction – Notation

- Metric:
  - $\eta_{\mu\nu} =$ diag(-1,+1, . . . , +1)

The Relativistic Point Particle – The Action

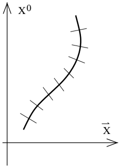
- Consider the action of a point particle (with fixed coordinates $X_\mu = (t, \vec{x})$ in a given frame):

$$S = -m \int dt \sqrt{1 - \dot{\vec{x}}\dot{\vec{x}}}$$

$\rightarrow$ not Lorentz-invariant, due to mixture of spacial and temporal coordinates under a Lorentz-transformation Λ.

- Consider instead for a generalized coordinate τ along the line element:

$$S = -m \int d\tau \sqrt{-\frac{dX^\mu}{d\tau}\frac{dX^\nu}{d\tau}\eta_{\mu\nu}}$$



Ref: [1]

Remark: S is proportional to the integral over the worldline of the particle

The Relativistic Point Particle – The Action

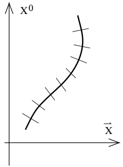
- Consider the action of a point particle (with fixed coordinates $X_\mu = (t, \vec{x})$ in a given frame):

$$S = -m \int dt \sqrt{1 - \dot{\vec{x}}\dot{\vec{x}}}$$

$\rightarrow$ not Lorentz-invariant, due to mixture of spacial and temporal coordinates under a Lorentz-transformation Λ.

- Consider instead for a generalized coordinate τ along the line element:

$$S = -m \int d\tau \sqrt{-\frac{dX^\mu}{d\tau}\frac{dX^\nu}{d\tau}\eta_{\mu\nu}}$$



Ref: [1]

Remark: S is proportional to the integral over the worldline of the particle

The Relativistic Point Particle – Action Symmetries

What are the symmetries of

$$S = -m \int d\tau \sqrt{-\frac{dX^\mu}{d\tau}\frac{dX^\nu}{d\tau}\eta_{\mu\nu}}$$

- Reparametrization invariance:

  Let $\tilde{\tau} = \tilde{\tau}(\tau)$. Then:

$$S' = -m \int d\tilde{\tau} \sqrt{-\frac{dX^\mu}{d\tilde{\tau}}\frac{dX^\nu}{d\tilde{\tau}}\eta_{\mu\nu}} = S$$

  $\rightarrow$ gauge symmetry of the action $\rightarrow$ still D-1 dof!

- Poincaré invariance:

  Let:

$$X'^\mu = \Lambda^\mu{}_\nu X^\nu + c^\mu$$

  Then:

$$S' = S, \qquad \text{as} \qquad \Lambda^\mu{}_\rho\, \eta_{\mu\nu}\, \Lambda^\nu{}_\sigma = \eta_{\rho\sigma}$$

The Relativistic Point Particle – Action Symmetries

What are the symmetries of

$$S = -m \int d\tau \sqrt{-\frac{dX^\mu}{d\tau}\frac{dX^\nu}{d\tau}\eta_{\mu\nu}}$$

- Reparametrization invariance:

  Let $\tilde{\tau} = \tilde{\tau}(\tau)$. Then:

$$S' = -m \int d\tilde{\tau} \sqrt{-\frac{dX^\mu}{d\tilde{\tau}}\frac{dX^\nu}{d\tilde{\tau}}\eta_{\mu\nu}} = S$$

  $\rightarrow$ gauge symmetry of the action $\rightarrow$ still D-1 dof!

- Poincaré invariance:

  Let:

$$X'^\mu = \Lambda^\mu{}_\nu X^\nu + c^\mu$$

  Then:

$$S' = S, \qquad \text{as} \qquad \Lambda^\mu{}_\rho \, \eta_{\mu\nu} \, \Lambda^\nu{}_\sigma = \eta_{\rho\sigma}$$

Dynamics of a Relativistic String – The Nambu-Goto Action

Action of the Relativistic String?

particle $\Leftrightarrow$ worldline $\Leftrightarrow$ $S = -m \int \underbrace{d\tau \sqrt{-\frac{dX^\mu}{d\tau}\frac{dX^\nu}{d\tau}\eta_{\mu\nu}}}_{\text{line element } ds}$

closed string $\Leftrightarrow$? $\Leftrightarrow$?

Boundary condition of closed strings living in D dimensions:

$$X^\mu(\tau,\sigma) = X^\mu(\tau,\sigma+2\pi) \quad \text{for } \mu = 0, 1, ..., D-1;\ \sigma \in [0; 2\pi)$$

Shorthand notation: $\sigma^\alpha = (\tau, \sigma)$ for $\alpha \in \{0; 1\}$

image of a string

Action of the Relativistic String?

particle $\Leftrightarrow$ worldline $\Leftrightarrow$ $S = -m\int d\tau \sqrt{-\frac{dX^\mu}{d\tau}\frac{dX^\nu}{d\tau}\eta_{\mu\nu}}$

closed string $\Leftrightarrow$ worldsheet $\Leftrightarrow$?

Boundary condition of closed strings living in D dimensions:

$$X^\mu(\tau,\sigma) = X^\mu(\tau,\sigma+2\pi) \quad \text{for } \mu = 0,1,...,D-1;\ \sigma \in [0;2\pi)$$

Shorthand notation: $\sigma^\alpha = (\tau,\sigma)$ for $\alpha \in \{0;1\}$

Dynamics of a Relativistic String – The Nambu-Goto Action

Action of the Relativistic String?

particle $\Leftrightarrow$ worldline $\Leftrightarrow$ $S = -m \int d\tau \sqrt{-\frac{dX^\mu}{d\tau}\frac{dX^\nu}{d\tau}\eta_{\mu\nu}}$

closed string $\Leftrightarrow$ worldsheet $\Leftrightarrow$ Nambu-Goto/Dirac Action

Boundary condition of closed strings living in D dimensions:

$$X^\mu(\tau, \sigma) = X^\mu(\tau, \sigma + 2\pi) \quad \text{for } \mu = 0, 1, ..., D-1;\ \sigma \in [0; 2\pi)$$

Shorthand notation: $\sigma^\alpha = (\tau, \sigma)$ for $\alpha \in \{0; 1\}$

Dynamics of a Relativistic String – The Nambu-Goto Action

How to describe the surface area to construct the action?

$$S \propto \int_{\partial V} d^2x = \int_{\partial V} d^2\sigma \, |\det J|$$

For this, first remember that any metric is given by:

$$g_{\alpha\beta} = g(e_\alpha, e_\beta)$$

So the metric on the worldsheet (the pullback metric) can be written as:

$$\gamma_{\alpha\beta} = \underbrace{\frac{\partial X^\mu}{\partial \sigma^\alpha} \frac{\partial X^\nu}{\partial \sigma^\beta} \eta_{\mu\nu}}_{(J^T \eta J)_{\alpha\beta}}$$

Thus,

$$\det \gamma = \det \eta \, \det{}^2 J = -\det{}^2 J$$
$$|\det J| = \sqrt{-\det \gamma} = \sqrt{-\gamma}$$

Dynamics of a Relativistic String – The Nambu-Goto Action

So write the action as:

$$S_{NG} = -\frac{1}{2\pi\alpha'} \int d^2\sigma \, \sqrt{-\gamma}$$

This action in invariant under,

- Poincaré transformations
- Reparametrization

and the eqations of motion (EoM) are given by:

$$\partial_\alpha \left(\sqrt{-\gamma} \, \gamma^{\alpha\beta} \partial_\beta X^\mu \right) = 0$$

$\Rightarrow$ rather hard to quantize in this form! Alternatives?

Way out: **The Polyakov Action**:

$$S_P = -\frac{1}{4\pi\alpha'}\int d^2\sigma\sqrt{-g}\,g^{\alpha\beta}\,\partial_\alpha X^\mu\partial_\beta X^\nu\,\eta_{\mu\nu}$$

The EoMs:

- for X^μ:
  - same as for the Nambu-Goto action!

$$\partial_\alpha\left(\sqrt{-g}\,g^{\alpha\beta}\partial_\beta X^\mu\right) = 0$$

- for $g_{\alpha\beta}$:

$$g_{\alpha\beta} = 2\frac{\partial_\alpha X^\mu\partial_\beta X^\nu\eta_{\mu\nu}}{g^{\rho\sigma}\partial_\rho X^\mu\partial_\sigma X^\nu\eta_{\mu\nu}} \equiv 2\frac{\partial_\alpha X\partial_\beta X}{g^{\rho\sigma}\partial_\rho X\partial_\sigma X}$$

Gains of the Polyakov action?

Symmetries of the Polyakov action

$$S_P = -\frac{1}{4\pi\alpha'}\int d^2\sigma\sqrt{-g}\,g^{\alpha\beta}\,\partial_\alpha X^\mu \partial_\beta X^\nu\,\eta_{\mu\nu}$$

- Poincaré invariance
- Reparametrization invariance
- Invariance under:

$$g'_{\alpha\beta} = \Omega^2(\sigma) g_{\alpha\beta}$$

$\Rightarrow$ **Weyl invariance**

However, using the conformal gauge and writing g as

$$g_{\alpha\beta} = e^{2\phi}\eta_{\alpha\beta}$$

can be undone by a Weyl transformation ($\phi = 0$). Thus,

$$g_{\alpha\beta} = \eta_{\alpha\beta}$$

Plot of the transformation in action
