 - \bullet $\eta_{\mu
 u}=\mathsf{diag}(-1,+1,\,\ldots,\,+1)$

The Relativistic Point Particle – The Action

Consider the action of a point particle (with fixed coordinates $X_{\mu}=(t,\vec{x})$ in a given frame):

$$S = -m \int dt \sqrt{1 - \dot{\vec{x}}\dot{\vec{x}}}$$

 \rightarrow not Lorentz-invariant, due to mixture of spacial and temporal coordinates under a Lorentz-transformation Λ .

lacktriangle Consider instead for a generalized coordinate au along the line element:

$$S = -m \int d\tau \sqrt{-\frac{dX^{\mu}}{d\tau}} \frac{dX^{\nu}}{d\tau} \eta_{\mu\nu}$$

Ref: [1]

4/10

Remark: S is proportional to the integral over the worldline of the particle

The Relativistic Point Particle – The Action

Consider the action of a point particle (with fixed coordinates $X_{\mu}=(t,\vec{x})$ in a given frame):

$$S = -m \int dt \sqrt{1 - \dot{\vec{x}}\dot{\vec{x}}}$$

 \rightarrow not Lorentz-invariant, due to mixture of spacial and temporal coordinates under a Lorentz-transformation Λ .

▶ Consider instead for a generalized coordinate τ along the line element:

$$S = -m \int d\tau \sqrt{-\frac{dX^{\mu}}{d\tau} \frac{dX^{\nu}}{d\tau} \eta_{\mu\nu}}$$

Ref: [1]

July 13, 2020

Remark: S is proportional to the integral over the worldline of the particle

Dynamics of a Relativistic String – The Nambu-Goto Action

Action of the Relativistic String?

particle
$$\Leftrightarrow$$
 worldline \Leftrightarrow $S = -m \int \underbrace{d\tau \sqrt{-\frac{dX^{\mu}}{d\tau}\frac{dX^{\nu}}{d\tau}\eta_{\mu\nu}}}_{\text{line element }ds}$

closed string
$$\Leftrightarrow$$
 ? \Leftrightarrow

Dynamics of a Relativistic String – The Nambu-Goto Action

Action of the Relativistic String?

particle
$$\Leftrightarrow$$
 worldline \Leftrightarrow $S = -m \int d\tau \sqrt{-\frac{dX^{\mu}}{d\tau} \frac{dX^{\nu}}{d\tau} \eta_{\mu\nu}}$

Dynamics of a Relativistic String – The Nambu-Goto Action

Action of the Relativistic String?

particle
$$\Leftrightarrow$$
 worldline \Leftrightarrow $S = -m \int d\tau \sqrt{-\frac{dX^{\mu}}{d\tau} \frac{dX^{\nu}}{d\tau} \eta_{\mu\nu}}$

closed string \Leftrightarrow worldsheet \Leftrightarrow Nambu-Goto/Dirac Action

The Relativistic Point Particle – Action Symmetries

What are the symmetries of

$$S = -m \int d\tau \sqrt{-\frac{dX^{\mu}}{d\tau} \frac{dX^{\nu}}{d\tau} \eta_{\mu\nu}}$$

► Reparametrization invariance:

Let $\tilde{\tau} = \tilde{\tau}(\tau)$. Then

$$S' = -m \int d\tilde{\tau} \sqrt{-\frac{dX^{\mu}}{d\tilde{\tau}}} \frac{dX^{\nu}}{d\tilde{\tau}} \eta_{\mu\nu} = S$$

ightarrow gauge symmetry of the action ightarrow still D-1 dof!

▶ Poincaré invariance:

Let:

$$X'^{\mu} = \Lambda^{\mu}{}_{\nu}X^{\nu} + c^{\mu}$$

Then

$$S'=S, \qquad ext{as} \qquad \Lambda^{\mu}{}_{
ho}\,\eta_{\mu
u}\,\Lambda^{
u}{}_{\sigma}=\eta_{
ho\sigma}$$

The Relativistic Point Particle – Action Symmetries

What are the symmetries of

$$S = -m \int d\tau \sqrt{-\frac{dX^{\mu}}{d\tau} \frac{dX^{\nu}}{d\tau} \eta_{\mu\nu}}$$

Reparametrization invariance:

Let $\tilde{\tau} = \tilde{\tau}(\tau)$. Then:

$$S' = -m \int d\tilde{\tau} \sqrt{-\frac{dX^{\mu}}{d\tilde{\tau}}} \frac{dX^{\nu}}{d\tilde{\tau}} \eta_{\mu\nu} = S$$

 \rightarrow gauge symmetry of the action \rightarrow still D-1 dof!

Poincaré invariance:

Let:

$$X'^{\mu} = \Lambda^{\mu}{}_{\nu}X^{\nu} + c^{\mu}$$

Then:

$$S' = S,$$
 as $\Lambda^{\mu}{}_{\rho} \eta_{\mu\nu} \Lambda^{\nu}{}_{\sigma} = \eta_{\rho\sigma}$

Covariant Quantization of the Solutions of the Nambu-Goto Action

$$S = \frac{1}{2\pi\alpha'} \int \sqrt{-\det g} \,\partial_{\mu} \tag{1}$$
